

## Miami-Dade

### Miami-Dade Certification - We're Official!

On January 3, 2008, Donovan Advanced Hurricane Protection received the Miami-Dade Notice of Acceptance for their hurricane protection systems for small and large missile impact.

The gold standard of certification, this milestone marks the release of Donovan Advanced Hurricane Protection (DAHP) products for sales and installation across the storm center of the South Eastern United States. While they had already been approved for Florida Building Codes, adding the certification from Miami-Dade means DAHP can access the toughest, most restricted market for hurricane protection.

"It's a great day," said Michael F. Ciferri, Jr. , Vice President / Product Manager of Donovan Enterprises. "Meeting and exceeding the Miami-Dade standards took the full efforts of our entire team, along with outside laboratories, engineers and government officials. We take great satisfaction in knowing that we support the full measure of Miami-Dade certification."

Not only did DAHP exceed the Miami-Dade standards, while working through the certification process the testing labs, engineers and government officials discovered areas where the standards could be more clearly defined. You can truly say that Donovan Advanced Hurricane Protection sets the standard for all other hurricane protection systems.
